

Study Protocol: #H15-374

Department: Psychology

This study is looking at how the brain is organized to help us learn language. We are looking for children, 6 – 10 years old, who are typically developing or have language delays. Your child will complete up to two, 3-hour visits at our lab. Your family will be given \$30 dollars for each visit. During the first visit, your child will complete puzzles, words games, and hearing, language, and reasoning assessments. We will also ask parents to fill out questionnaires. If asked to come for a second visit, your child will have an MRI of their brain while playing word games in the scanner, and will get to take home a picture of his or her brain!
