

PARTICIPANT PREPERATION FOR fMRI STUDY

Prior to the study:

Please remove all body piercings. If you are concerned that a piercing may close, plastic “holders” may be used.

Dress comfortably. We recommend t-shirts without big prints or embroidery, shorts, leggings, or sweat pants. Please avoid metal grommets, zippers, underwire bras, etc. We do have scrubs available if needed.

Avoid any hair elastics or clips with metal.

You will be provided with a locker for your personal belongings.

When you arrive:

You will be asked to fill out a metal screening questionnaire. This questionnaire asks about metal implants and surgeries. Once you are done with the questionnaire, the MRI technologist will review the sheet with you. Please feel free to ask any questions and voice any concerns you may have; safety is our #1 priority!
