

Volunteers are wanted for a research study at the University of Connecticut. The purpose of this study is to examine language processing in individuals with and without language impairment. Monolingual English adults (18-35 years of age) are invited to participate.

The research takes place in 1-2 sessions that are approximately 1-2 hours long at the UConn Laboratory for Spoken Language Processing on the Storrs campus. Participants will listen to speech sounds or read words on a screen and will be asked to indicate what they hear or see. Participants may also complete language assessments and a questionnaire. Some participants will have an MRI of their brain while performing language tasks in the scanner. Participants will receive monetary compensation for participation and will also be provided with scores on standardized language tests if requested and a picture of their brain.
